

CURRICULUM VITAE
LYMAN ALEXANDER PAGE JR.

September 2015

Department of Physics, Princeton University
Princeton, New Jersey 08544-0708
Phone: (609) 258-5578, Email: Page@Princeton.edu

Education

Massachusetts Institute of Technology, Cambridge, MA	Ph.D. 1989 (Physics)
Thesis Advisor: Stephan S. Meyer	
Bowdoin College, Brunswick, ME	B.A. 1978 (Physics)

Honors and Awards

Gruber Prize	August 2015
Elected APS Fellow	Dec 2013
Gruber Prize (with WMAP team)	August 2012
Kavli AAS Lecture	January 2012
Shaw Prize	September 2010
Thomson Reuters Citation Laureate	2010
Phi Beta Kappa teaching award and induction	June 2010
Welch Lectureship (University of Toronto)	April 2010
Chandrasekhar Lectures (ICTS)	April 2010
Member of the National Academy of Sciences	2006
Philips Lectureship (Haverford College)	2006
Fellow of the American Academy of Arts & Sciences	2004
Marc Aaronson Lectureship & Prize	November 2003
Primakoff Lectureship (Univ. of Pennsylvania)	March 2003
David and Lucile Packard Fellowship	September 1994
Princeton Engineering Council Teaching Award	May 1994 & 1992
Research Corporation Cottrell Scholar	May 1994
National Science Foundation NYI Award	August 1993
NASA Graduate Student Researchers Program Fellowship	1987-1989

Current Affiliations and Services

Advisor for the Canadian Institute for Advanced Research (CIFAR) C&G program.
Member of Associated Universities Inc. (AUI) board.

Employment and Research History

- James S. McDonnell Distinguished University Professor July 2015 - present
 Chair July 2011 - present
 Associate Chair July 2008 - July 2011
- Cyrus Fogg Brackett Professor of Physics July 2014 - June 2015
- Henry DeWolf Smyth Professor of Physics July 2005 - June 2014
- Professor of Physics at Princeton July 1998 - July 2005

- Associate Professor of Physics at Princeton July 1995 - June 1998
- Assistant Professor of Physics at Princeton July 1991 - June 1995
 - Page's primary research is on the analysis and measurement of the cosmic microwave background (CMB) from ground-based, balloon-borne, and satellite platforms with HEMT amplifiers, SIS mixers, and bolometers. Detection techniques include direct mapping, time domain beam synthesis, and interferometry. Page has been a PI or Co-I on the FIRS, SASK, MSAM, QMAP, TOCO, and MINT experiments. He is one of the original co-investigators and the Princeton lead on the *WMAP* satellite which has mapped the anisotropy in the CMB over the entire sky with sub-degree resolution. He is the director of the ACT/ACTPol project in which a dedicated 6 m telescope in Chile with thousands of detectors is mapping the CMB with arcminute resolution, and will soon map in polarization. He is a co-director of the ABS experiment to measure the CMB B-mode polarization.
- Instructor of Physics at Princeton July 1990 - July 1991
- Postdoctoral Research Fellow at MIT October 1989 - July 1990
- Graduate Student at MIT September 1983 - September 1989
 - Built and flew a four channel balloon-borne bolometric radiometer to measure the anisotropy in the CMB. This experiment, called FIRS, ultimately confirmed the discovery of the anisotropy by the COBE/DMR experiment.
- Self employed February 1980 - September 1983
 - Rebuilt a 37' wooden ketch and sailed about the Caribbean and east coast of the United States. To support myself and my boat, I worked as a painter, carpenter, rigger, and cabinet maker in various ports of call. In the nine months before graduate school I was based in Boston.
- Research Technician, Bartol Research Foundation, Newark, DE, McMurdo Antarctica, and South Pole, Antarctica. September 1978 - January 1980
 - Helped operate and maintain a cosmic ray detection station, riometer, and a four inch solar telescope (the first one at the South Pole) in the Antarctic. Spent the 1979 winter at McMurdo Station.
